⁴ University of Ljubljana, Biotechnical Faculty, Slovenia

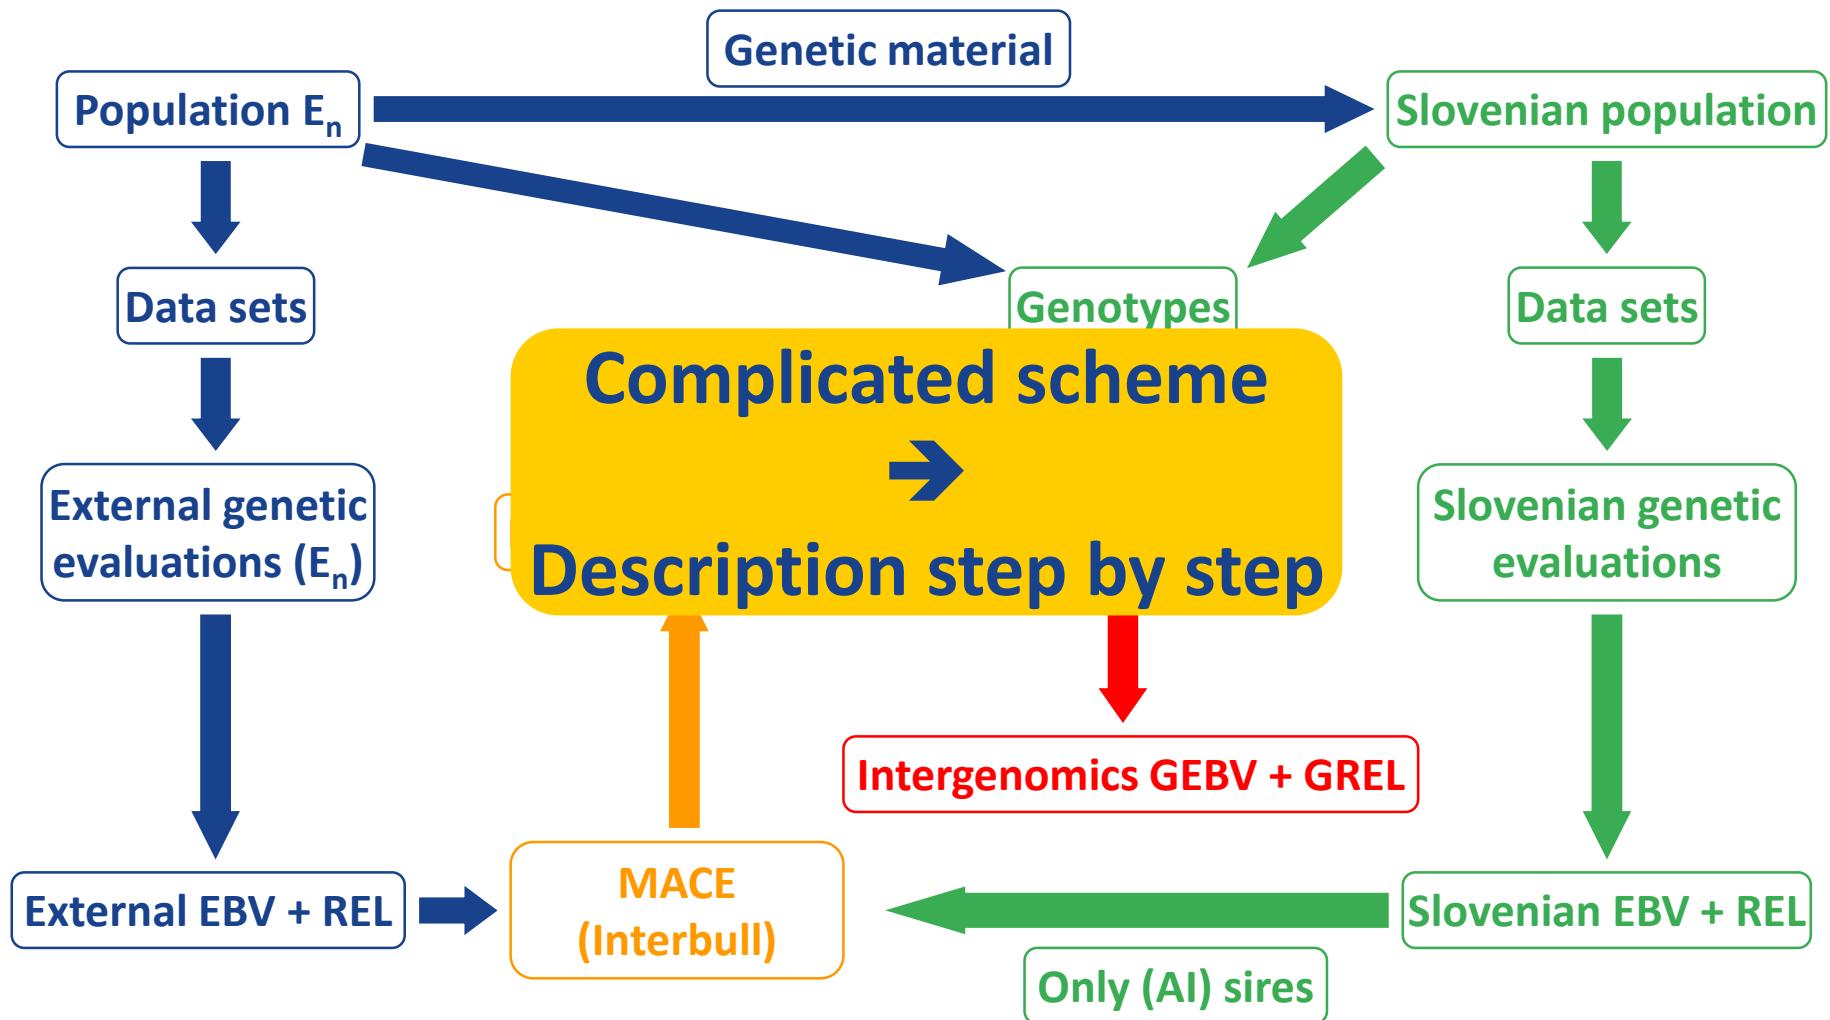

Current Slovenian situation

- ✓ Brown Swiss dairy cattle
- ✓ Traits: Milk, fat and protein milk yields
- ✓ Possible different genetic/genomic EBV and REL associated with an animal
 - ❑ Slovenian genetic evaluation
 - ❑ MACE evaluation
 - ❑ Intergenomics evaluation

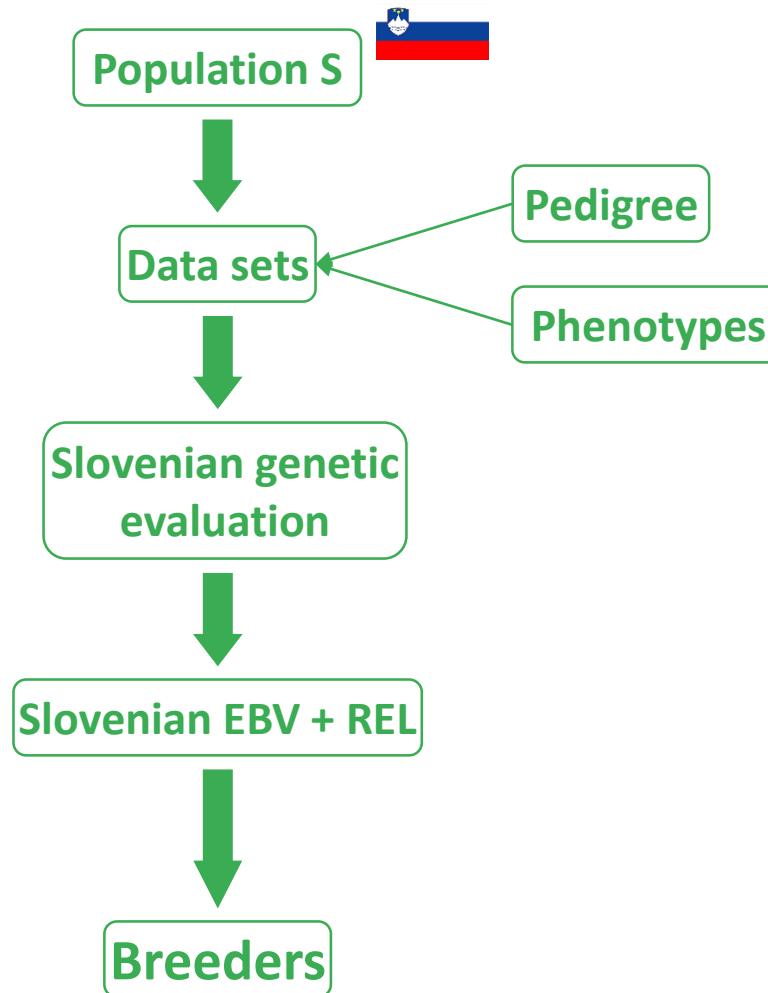

Current Slovenian situation

Only bulls

Slovenian animals
(e.g., cows, young bulls)

Slovenian EBV + REL

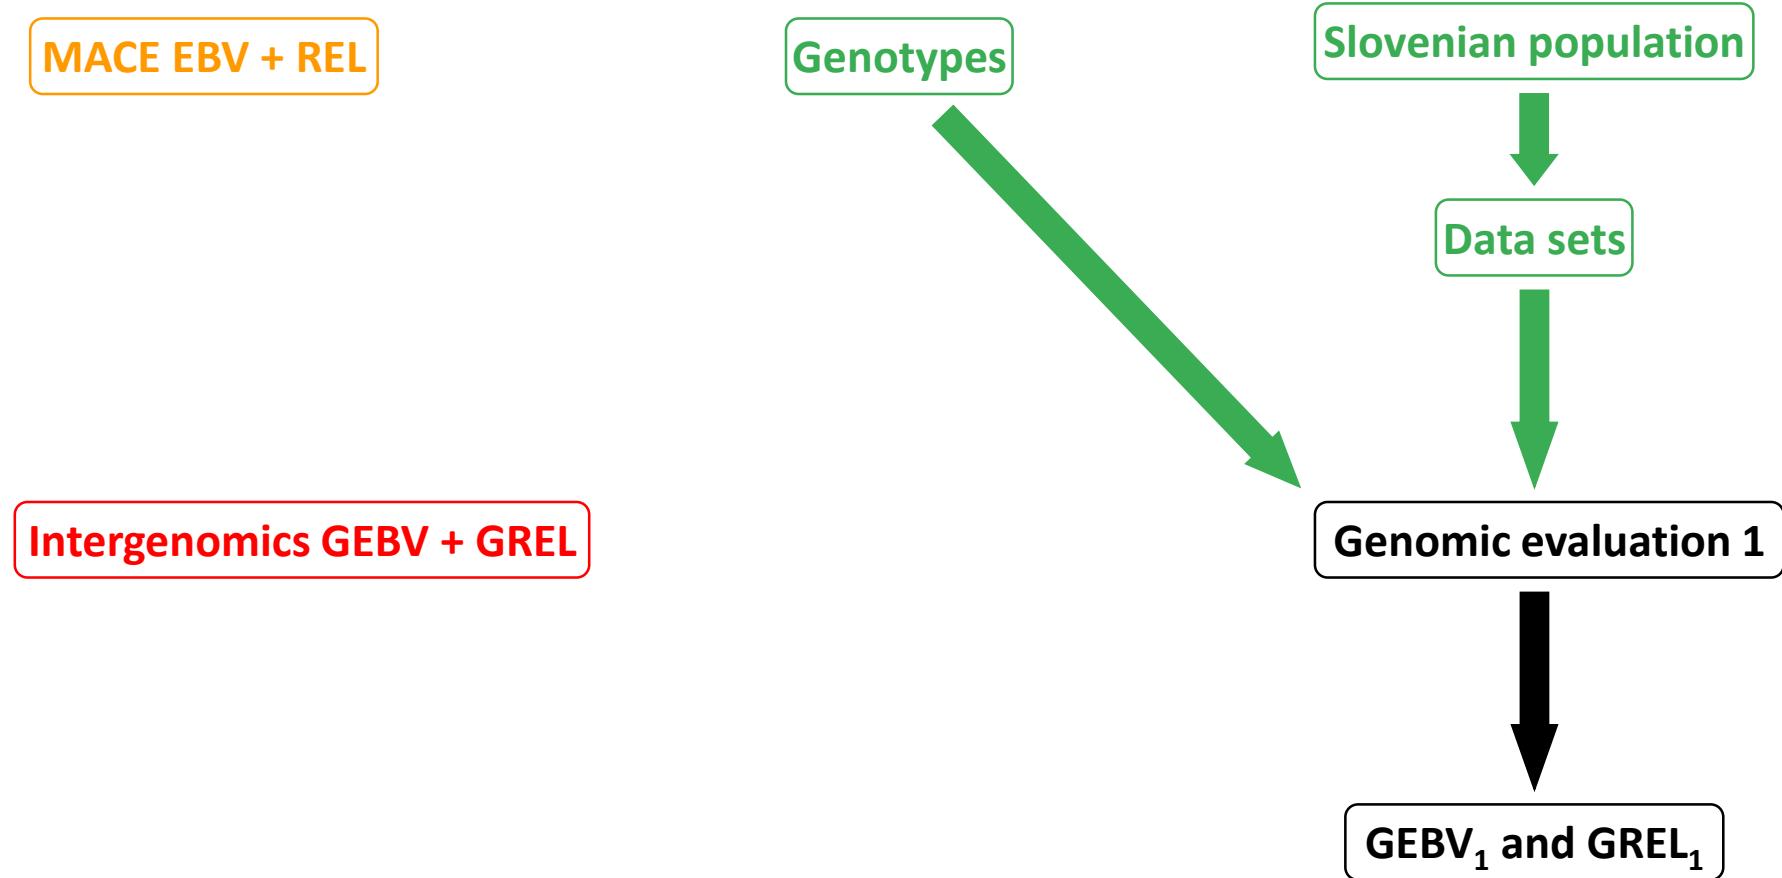

Aim

✓ Combination of

- Pedigree
- Slovenian phenotypes
- Genotypes
- External information
 - MACE EBV and REL
 - Intergenomics GEBV and GREL

for milk, fat and protein yields
for Brown Swiss dairy cattle

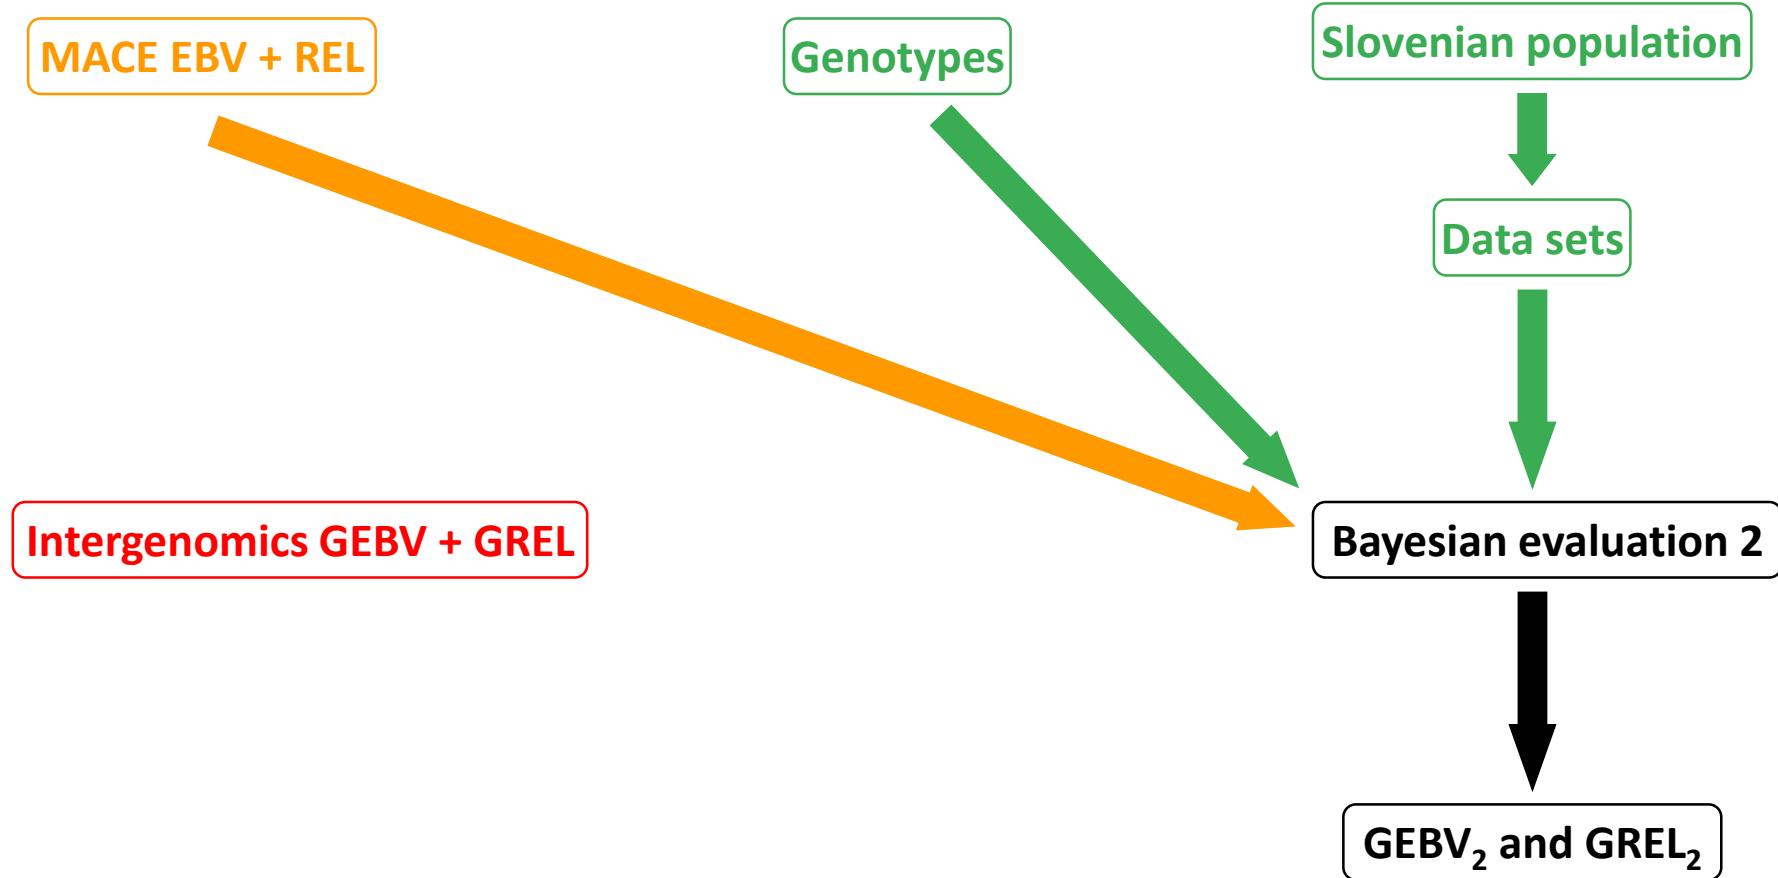

First solution...

First solution...

- ✓ Genomic evaluation (single-step)
- ✓ But...
 - No consideration of external information
(MACE or Intergenomics (G)EBV and (G)REL)

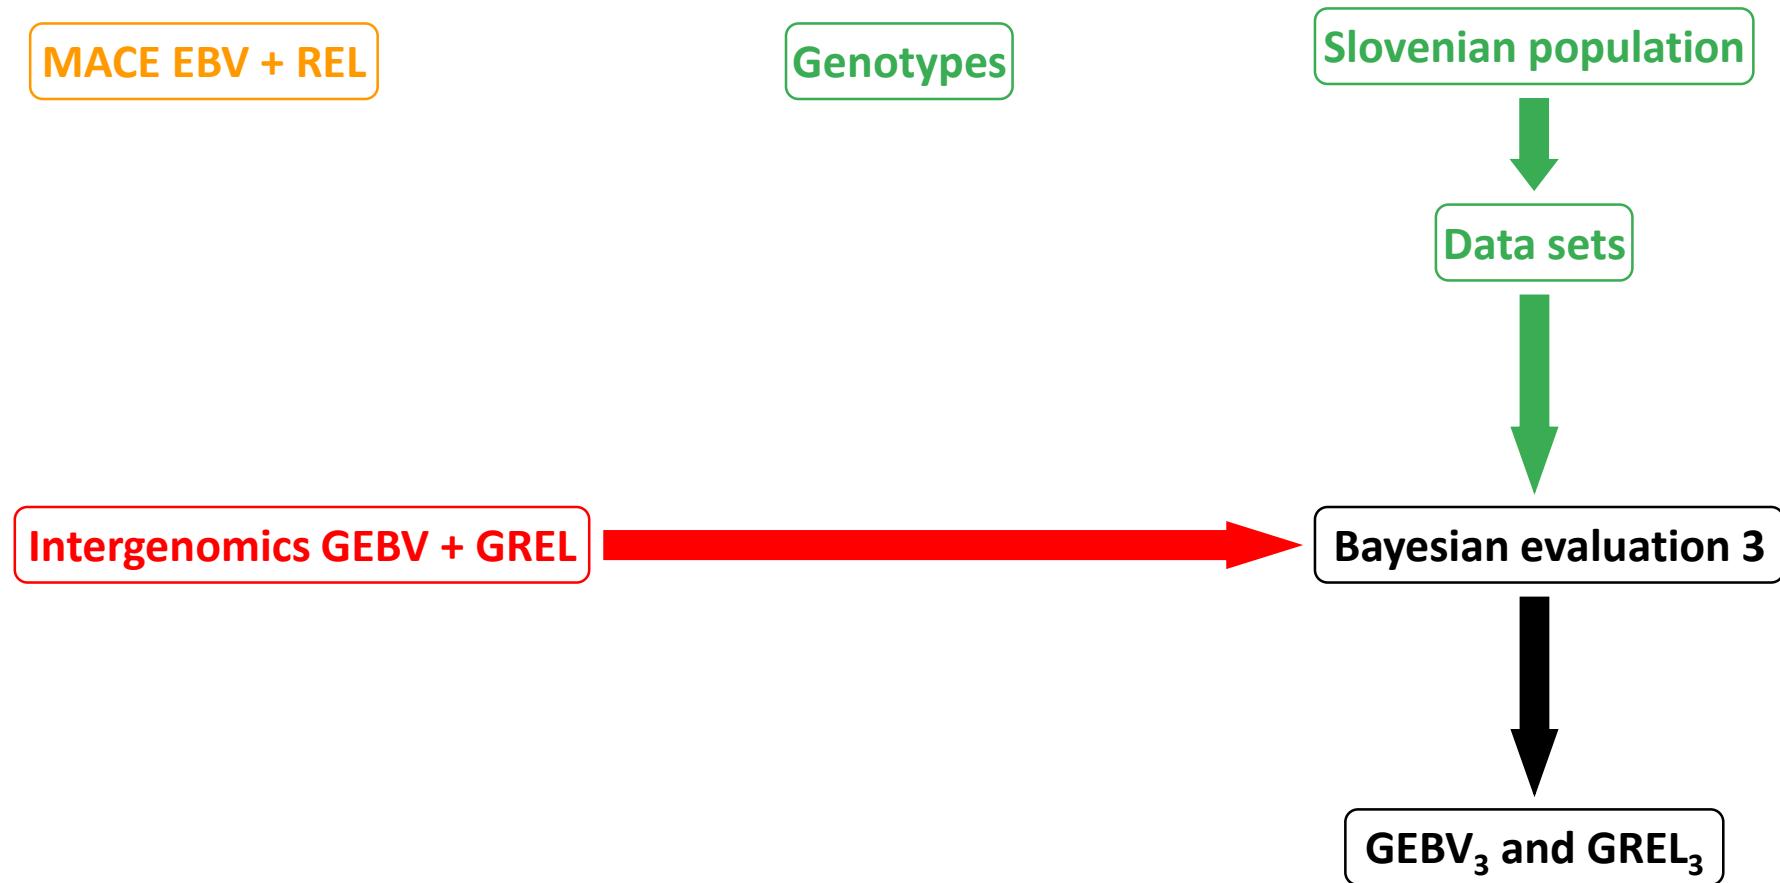

Second solution...

Second solution...

- ✓ Genomic evaluation (single-step)
 - ❑ Easy consideration of genotypes for cows, young animals,...
- ✓ Consideration of MACE EBV and REL
- ✓ Similar to the Intergenomics evaluation
- ✓ But...
 - ❑ Not the same methodology
 - ❑ Not the same information

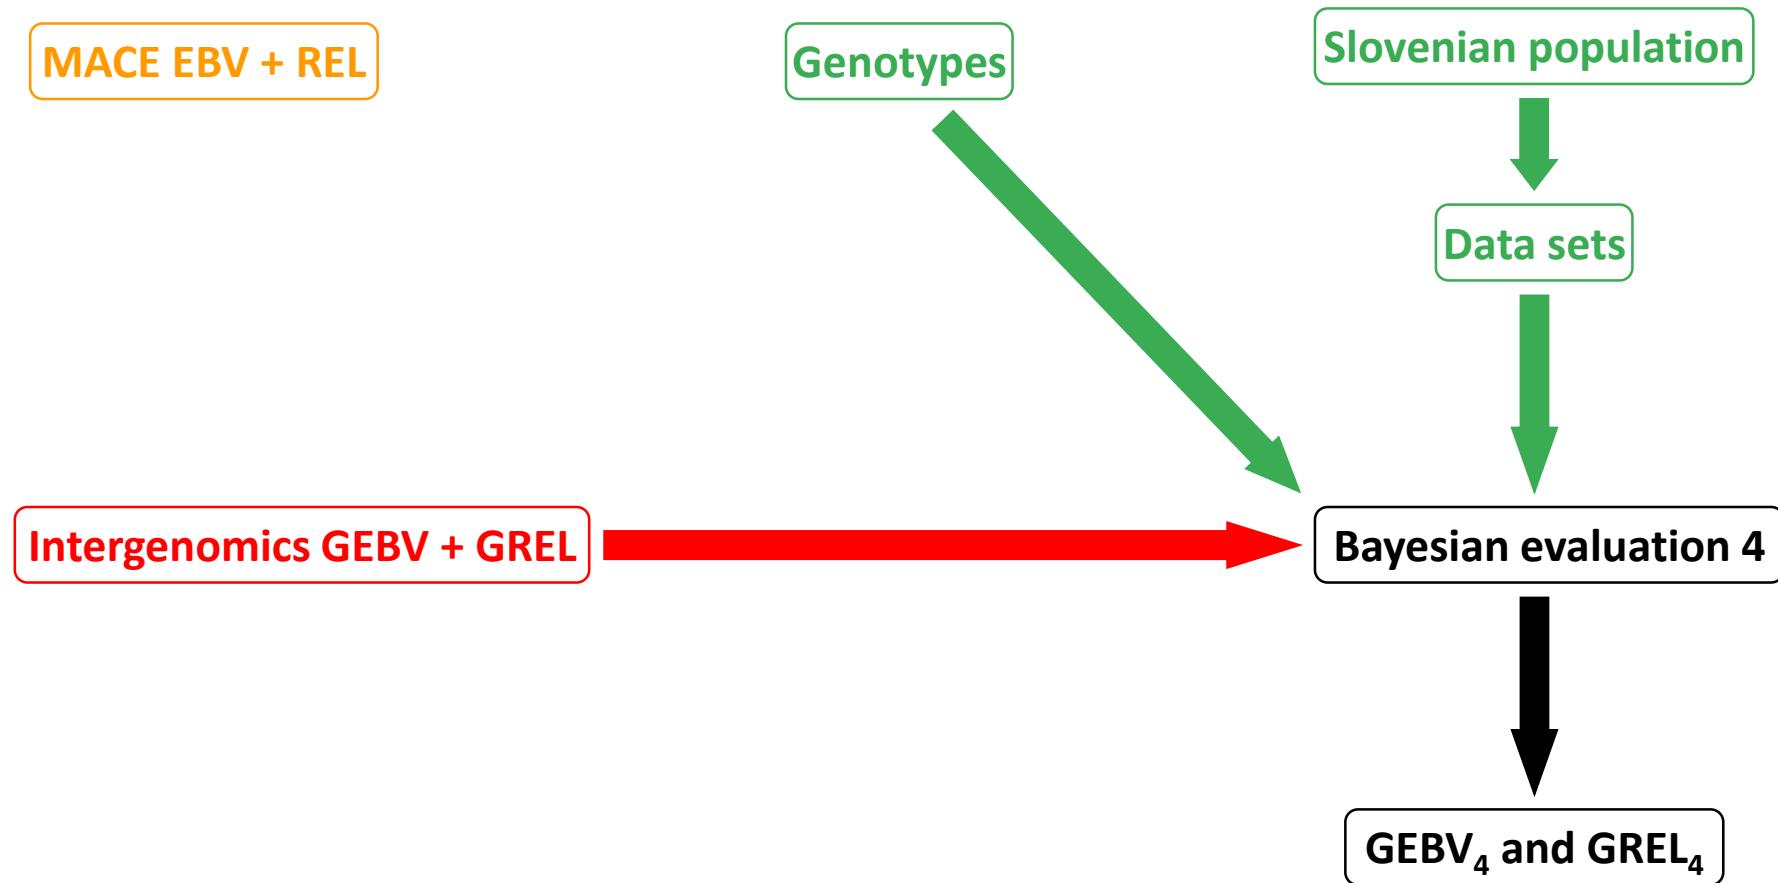

Third solution...

Third solution...

- ✓ « Genomic » evaluation
 - ❑ Consideration of Intergenomics GEBV and GREL
- ✓ But...
 - ❑ How to consider genotypes for cows, young animals,...

Fourth solution...

Fourth solution...

- ✓ Genomic evaluation (single-step)
 - Easy consideration of genotypes for cows, young animals,...
- ✓ Consideration of Intergenomics GEBV and GREL
- ✓ But...
 - Double-counting of genomic information (through genotypes and GEBV (GREL))
 - ➔ Possibility to take into account for few animals (<30,000?)

Results

- ✓ Brown Swiss population
 - ❑ Consideration of 5 groups of animals

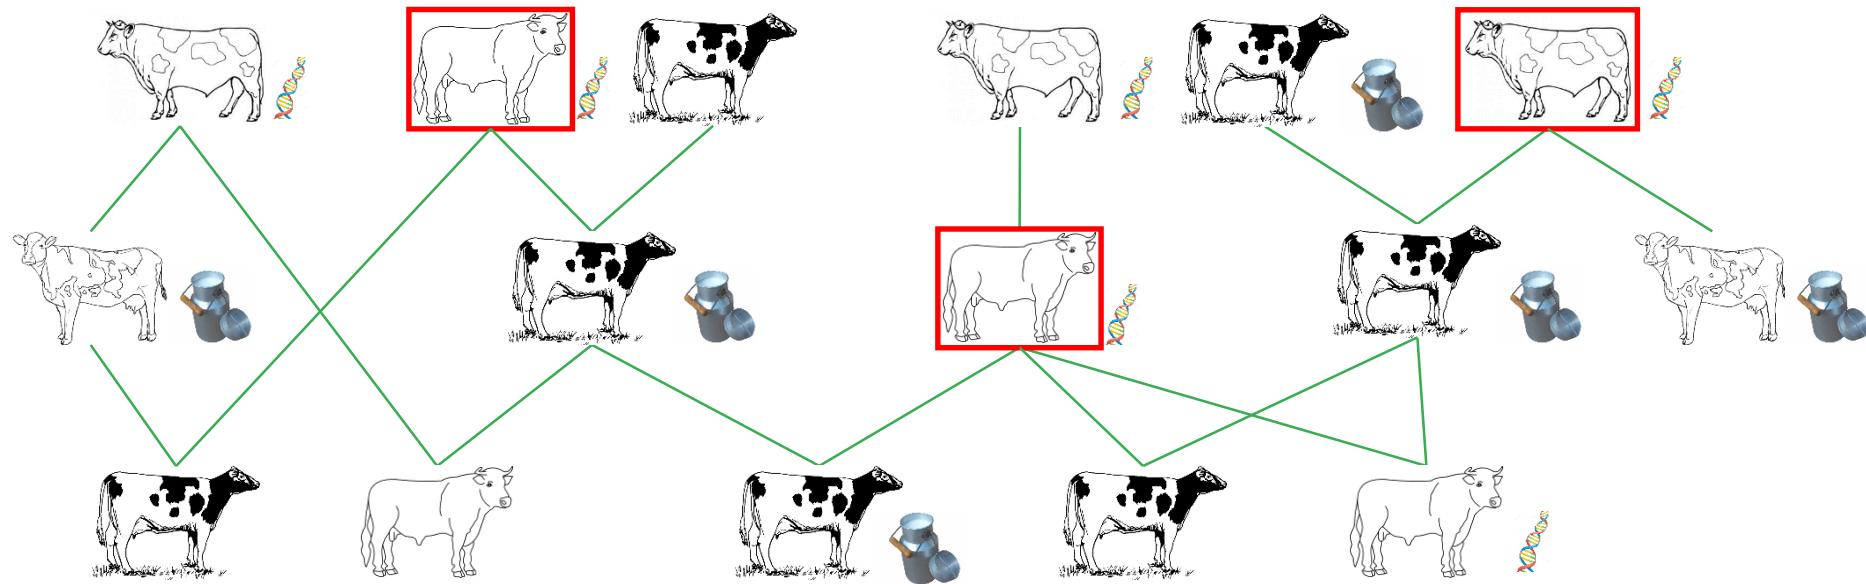

- ✓ Reference evaluation
 - ❑ Function of the considered group of animals
 - ❑ Intergenomics or Slovenian evaluation
 - Consideration of 5 groups of animals

Internally used sires

- ✓ Bulls (Slovenian or not)
 - Associated with Intergenomics GEBV and GREL
 - Having female progeny with Slovenian milk yield records
 - Reference evaluation: Intergenomics evaluation

- 319 internally used sires

3	0.98	0.70 (0.12)
4	0.98	0.70 (0.12)

Slovenian animals - no milk yield

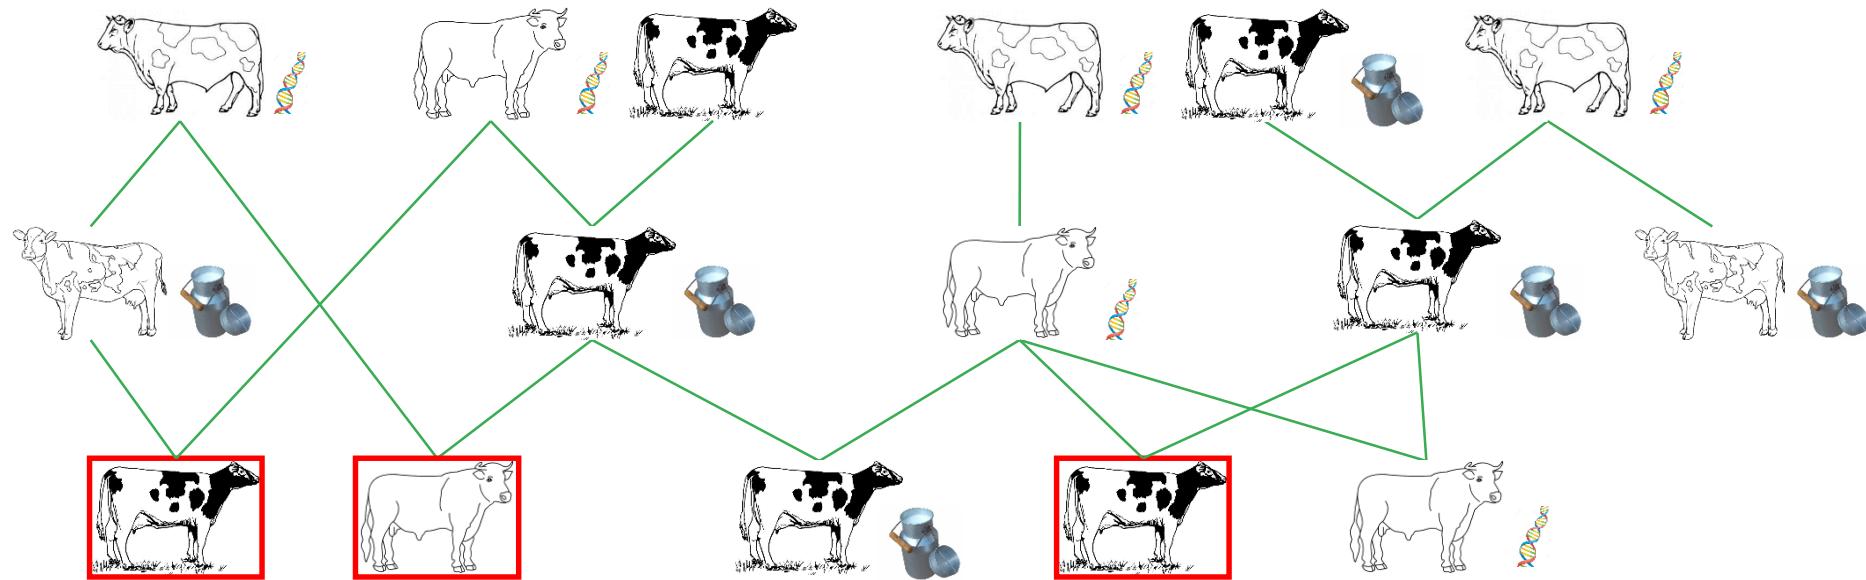

✓ Slovenian animals

- Not associated with Slovenian milk yield records
- Sired by an internally used sire (i.e. with Intergenomics GEBV and GREL)
- Reference evaluation: Slovenian genetic evaluation

→ 3 groups in function of Slovenian REL (REL_S)

- | | |
|-------------------------|-------|
| □ $REL_S < 0.50$ | 1,520 |
| □ $0.50 < REL_S < 0.75$ | 348 |
| □ $REL_S > 0.75$ | 103 |

Slovenian animals - no milk yield

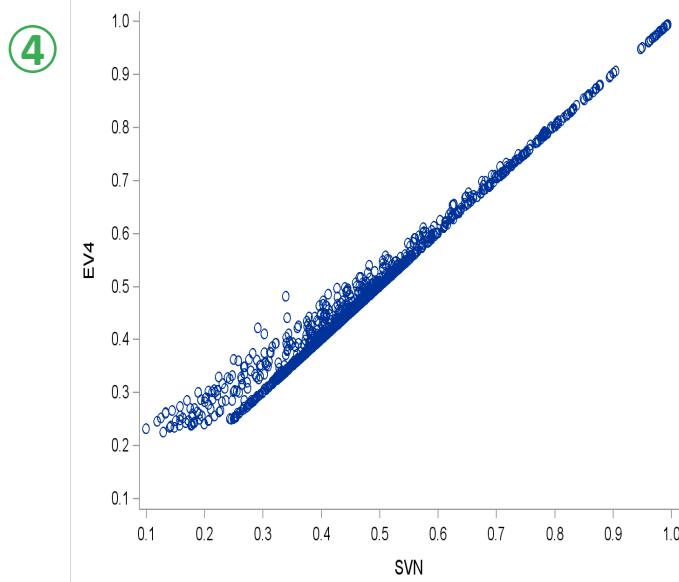

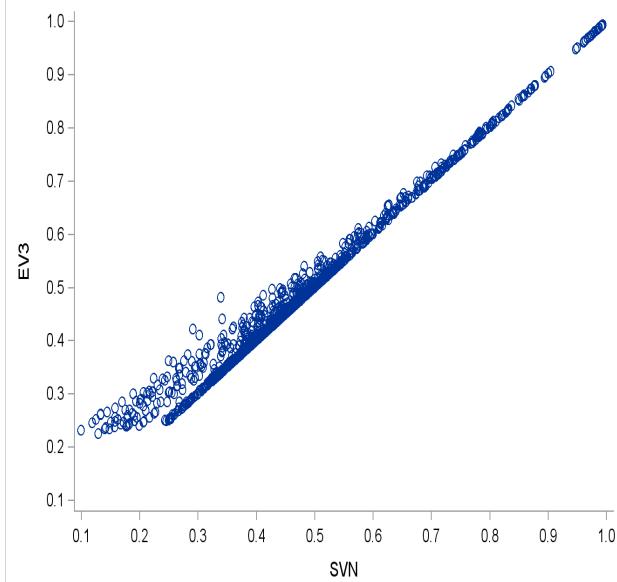

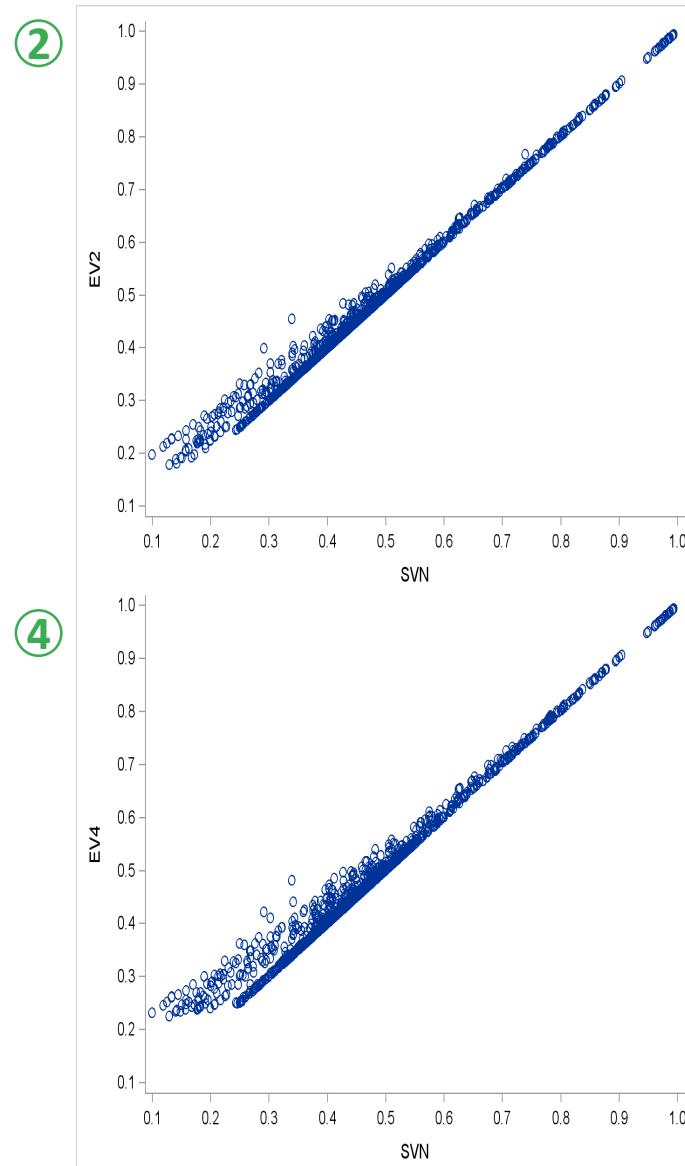

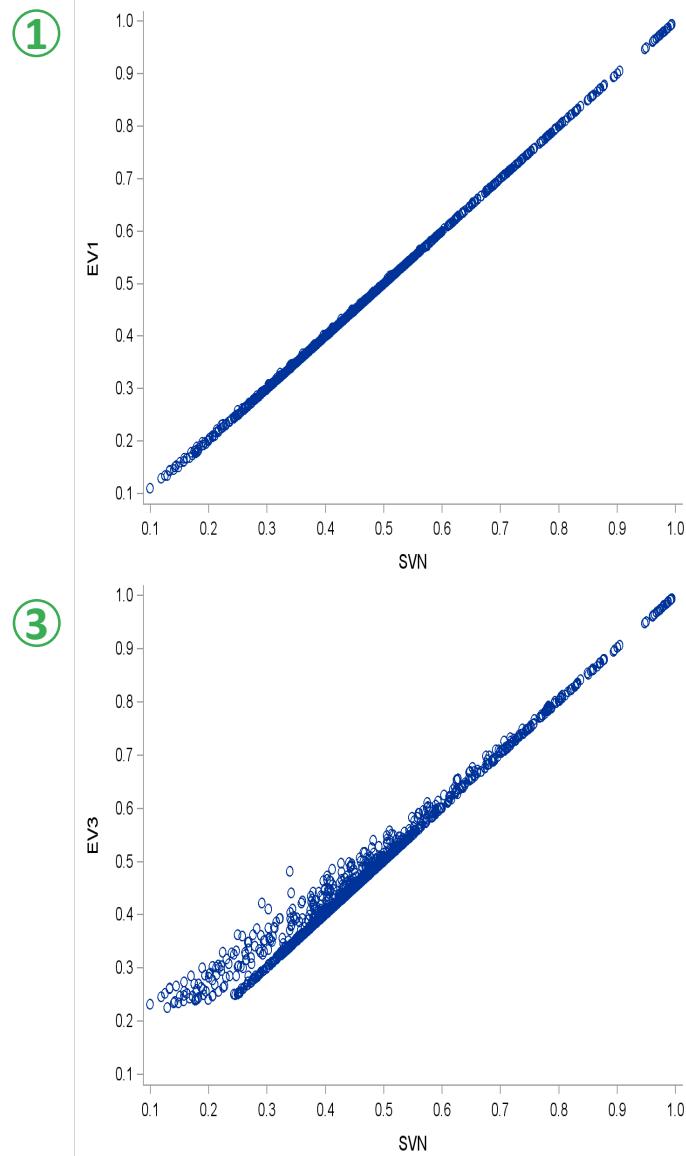

Slovenian animals - no MY- r

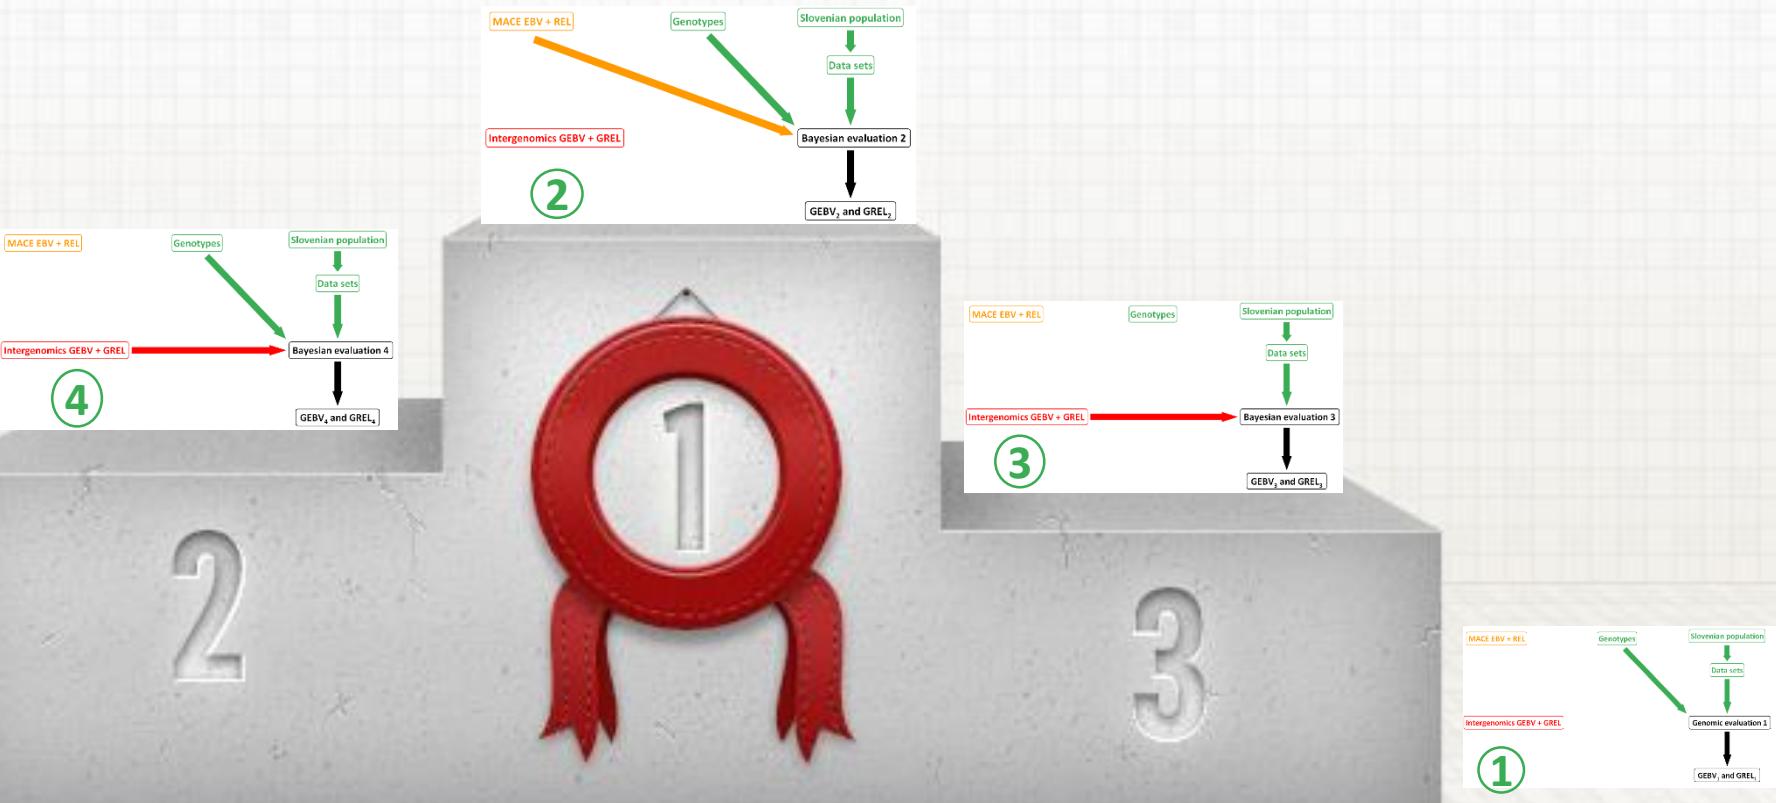

Evaluations	$REL_s < 0.50$	$0.50 < REL_s < 0.75$	$REL_s > 0.75$
Slovenian	1.00	1.00	1.00
1	0.99	0.99	0.99
2	0.98	0.99	0.99
3	0.95	0.99	0.99
4	0.95	0.99	0.99

Slovenian animals – no MY: REL

Solutions - comparison

Discussion-conclusions

✓ Solution 2 & 4-?

- ❑ Relevant „national“ genomic evaluation
- ❑ No changes for cows
- ❑ Minor changes for bulls

✓ Terms and Conditions

- ❑ Genotypes exchange
- ❑ Software - methodology

It seems
that could
be applied
also to
other dairy
population
